

FORZA

FORZA AERO OUTFRONT

This Forza Aero Outfront is made for the Ridley Noah Fast handlebars. The Outfront is attached to the handlebar by 2 bolts below the handlebar and stem.

Compatible with Mio, Garmin and Wahoo. Outfront can be placed more to the front or the back so it will always perfectly fit from a Garmin Edge 820 to a Garmin Edge 1030.

This Aero Outfront will be delivered with the Noah Fast as a standard, free of charge upgrade. This Aero Outfront can be bought as an aftermarket product as well.

Upgrades

The Light&Camera Mount can be attached by 2 bolts to the Forza Aero Outfront. That way you can film every move you make on the bike or center your light perfectly to the middle of your handlebar, while keeping your aero handlebar clean and aerodynamic.

Not using a GPS but your smartphone on the bike? With this smartphone mount set you turn the Forza Aero Outfront into the Aero smartphone outfront.

Attach the mount to the top of the Aero Outfront. Wipe the back of your smartphone cover clean and attach the 3M strip to the back of your cover. The other side of the 3M strip you can attach to the smartphone mount that is already attached to the Aero Outfront.

Not feeling secure? You can use the 4 little bolts to extra secure your cover to the mount. Use the white sticker on the inside of your cover to make sure your smartphone won't be damaged when putting it back in the cover.

Tip: use a cover you will only use for this smartphone. Sticking it and tearing it loose will lower to sticking power of the 3M strip.
